INTRODUCTION

Noise pollution can be great disturbance and disruption to your working environment and workforce, and fan noise is one of the most predominant noise sources. Silencers are well known for their ability to attenuate noise while permitting air to pass through them. They come in a vast range of performances and materials, and are available for various applications.

A-Tech Rectangular Duct ("ARD") Silencers are designed to reduce noise primarily in ventilation and air-conditioning systems within the office buildings, in lecture/conference rooms, hotels, hospitals, and virtually any other places where air-conditioning or ventilation systems are installed. Our silencers are designed to provide superior acoustic and aerodynamic performance – **your reliable source of effective noise attenuation across vast industries.**
